

Joe Fitzler

Quantitative Analyst

Joe has always enjoyed research and data analysis. After graduating with a degree in Industrial and Manufacturing Systems Engineering from the University of Missouri – Columbia, he decided to continue his education at Mizzou, earning an MS in Industrial Engineering. He found the Quantitative Analyst a perfect fit for his skills and interests because the position allowed him to use his analytical skills and still have very close interaction with clients, so he packed his bags and headed for the mountains.

During the entire hiring process, Joe found Corona to be very accommodating. “Throughout the entire process, Leo was very flexible in allowing me to complete my testing remotely and he maintained a clear channel of communication, always keeping me in the loop.” During the interview at Corona’s office, Joe recalls the Corona employees were very personable yet professional. “I could tell Corona had a talented and hard-working staff that is very proud of their cooperative culture.”

Since starting as an analyst in October of 2007, Joe has enjoyed his experience at Corona. “The variety of work makes every day different and interesting. I am never bored and am always challenged by the projects and my co workers.” Joe also feels the principals are very receptive to new ideas and are always looking for ways to improve Corona.

On a typical day, Joe may be doing anything from designing surveys to doing statistical analysis or mathematical optimization. He is not limited to quantitative work as his title suggests; he is often found helping on qualitative or strategic planning projects as well.

As a St. Louis native, Joe is a big Cardinals fan and loves to cheer on the Mizzou football team. Away from the office, Joe enjoys running, biking and taking his Labrador Katie to the lake. He currently is training for his first Ironman triathlon and hopes to take up skiing soon.

“The variety of work makes every day different and interesting. I am never bored and am always challenged by the projects and my co workers.”
