

Melissa Crooks

Quantitative Analyst

Melissa earned a Master of Science degree in mathematics from Western Kentucky University and a Bachelor of Science degree with a major in mathematics and a minor in secondary education from Campbellsville University. Prior to Corona Research, Melissa spent five years teaching mathematics in both secondary and post-secondary institutions in Kentucky. In early 2007, Melissa and her husband decided it was time to move to the big city. Melissa first found Corona Research in April 2007 and after reading the job description was ecstatic about the possibility of applying her love of mathematics to a real world setting.

During the interview process, Melissa recalls the employees of Corona Research made every effort to make it a comfortable and informative experience. “It was wonderful being able to meet a variety of people during the interview process. I was really impressed with the unique skill set that each employee of Corona Research brought to the company.” An opportunity became available in October 2007 and she knew this was the job for her.

Since beginning work at Corona Research in November 2007, Melissa has discovered, as many have pointed out, there is no typical day at Corona Research. Some of Melissa’s most recent tasks have included data analysis, reviewing client reports, and creating presentations.

Outside of the office, Melissa enjoys working out with her husband, watching movies, and reading. She enjoys many outside activities, including biking, camping, and hiking. She and her husband are hoping to explore more of Colorado in 2008 and maybe even try skiing this winter.

“I was really impressed with the unique skill set that each employee of Corona Research brought to the company.”
